

# GENERA WORKSHOP FOR EXPERTS AND PRACTITIONERS

22–23 JANUARY 2018

KINGS COLLEGE LONDON

THE STRAND

## SHARING SUCCESSFUL GENDER EQUALITY MEASURES

### Establishing GENERA Network

for research organisations in physics and related fields

GENERA is a European project funded under HORIZON 2020 to implement Gender Equality Plans (GEPs) in physics research organisations. The project started in September 2015 and is now ready to share and compare its results and experiences of implementing gender equality measures with other organisations.

The aim of the Workshop is to discuss up-to-date evidence and best practice for GEP design and implementation in physics research organisations and to establish the GENERA Network as a platform for exchanging experiences, good practice, and enabling mutual learning to achieve systematic and systemic improvement in gender equality and human capital development conditions in physics.

You should attend the workshop if you :

- » are directly or indirectly responsible for human resources development and gender equality conditions in your organisation
- » have been/are planning to implement a gender equality plan
- » have developed good practice that can be adopted by others
- » are looking for support or solutions to specific problems
- » want to make physics a preferred career choice for more young people and women in particular

Further details and registration are available at [www.genera-project.com/events](http://www.genera-project.com/events)
